**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. **Claims 1-12, 13-20, 35-41**, drawn to a communication method and apparatus comprising signal encoding using combined lossless and lossy compression, classified in class 704, subclass 227.

II. **Claims 21-29**, drawn to a method and an apparatus for improving the quality of a lossy-compressed signal, classified in class 704, subclass 200.1.

III. **Claims 30-34**, drawn to a method for sorting parameters of an encoded speech signal for compression, classified in class 704, subclass 220.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as improving the quality of a strictly lossy-compressed signal. Improving the quality of a lossy-compressed signal does not have to particularly be combined with lossless compression in invention I. See MPEP § 806.05(d).

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility

such as sorting parameters of an encoded speech signal for compression, which does not particularly have to be combined with invention I. In other words, sorting parameters of encoded speech compression does not have to use combined lossless and lossy compression. See MPEP § 806.05(d).

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II does not need to use the method invention of invention III to improve decoded signal quality, and invention III can be used without having a tilt factor of invention II as a coding parameter. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
